

For-Hire Angler Travel and Targeting Report 2020: Bay County

A data report for the Bay County Government and Tourist Development Council prepared
by:

Ed Camp, Assistant Professor of Fisheries and Aquaculture Governance, University of
Florida, edvcamp@ufl.edu

Scott Jackson, Regional Specialized Extension Agent Bay County, lsj@ufl.edu

Table of Contents

Abbreviations and Definitions

NMFS: National Marine Fisheries Service.

MRIP: Marine Recreational Information Program, which is operated by NMFS to survey coastal anglers.

APAIS: Access Point Angler Intercept Survey, the survey implemented by MRIP to collect information about angling.

West Panhandle region: refers to the areas of and marine waters adjacent to Walton, Bay, and Gulf counties.

Overview Summary

Why this report might be important

Recreational fishing is one of the dominant recreational uses of marine ecosystems globally, and marine recreational fisheries (recreational fisheries occurring in saltwater) are particularly important to Florida. Florida has more saltwater anglers than any other state—2.4 million (USFWS 2011), with over a million saltwater fishing licenses sold annually. The total economic output (market activity) of saltwater fishing in Florida was estimated at around \$8b annually (NOAA 2017), making fishing a vital part of Florida's overall economy, and especially critical for coastal counties. Because of their importance, marine recreational fisheries in Florida are carefully managed by state (Florida Fish and Wildlife Conservation Commission; FWC) and by federal (NOAA's National Marine Fisheries Service, NMFS) agencies. These two agencies partner to collect information about recreational fishing that is freely available to the public in the form of large databases. Extracting and visualizing these data can be challenging. We have queried these databases and summarized information we think may be helpful to the for-hire fishing industry and related tourism industry of Bay County. **Specifically this information can be used to inform advertisements of the for-hire fishing and related tourism in Bay County.**

What this report can be used for

This report is designed to provide information about marine recreational for-hire fishing dynamics in Bay County. The for-hire fishing sector includes private charters where a small group of anglers (usually 1-6 people) hire a guide to take them fishing, as well as "party" or "head" boats, where usually 20 or more anglers pay per person to fish from a larger, captained boat. The for-hire fishing industry is important for several reasons. First, it represents employment and livelihoods for the guides, captains, and crew offering for-hire fishing services. Second, the for-hire sector allows people who do not own or rent their own boats access to recreational fishing. Finally, the for-hire sector can play a role in tourist decisions, as the availability of for-hire fishing can attract angler from out of county, state, or even country to travel to local areas to stay and fish.

The for-hire fishing dynamics described here include information about what species of fish for-hire recreational fishers (here called "angler clients") are most often trying to catch and where angler clients come from when they make a for-hire trip to marine waters from Bay County. Angler targeting and travel information may have several uses. Understanding what fish species are commonly targeted may help inform:

- Which species are most popular with local or non-local angler clients.
- How to best advertise fishing in this area—e.g. what fish species should be pictured in advertisements.
- Which fishery management rule changes **might** most affect the local for-hire industry and their angler clients.
- How changes in fish populations (like from a habitat change or fish kill) may affect the amount of for-hire fishing trips, angler travel, and eventually, local economies.

Information on where anglers come from when they fish local waters has multiple potential uses as well, and we think it can inform:

- Locations to place advertisements for local for-hire fishing. For example, does it make more sense to advertise Bay County recreational fishing in New York, or in Georgia?
- Which people might want to be involved in local for-hire fisheries decision-making. For example, if many angler clients who commonly fish Bay County reside in other counties, these anglers may be interested in Bay County rule changes.

Together, this information is intended to help the local for-hire fishing industry and related tourism industry of Bay County. It may also be useful to the the Bay County Government and Tourist Development Council, especially if they work with or on behalf of the for-hire fishing industry to promote marine for-hire fishing-based tourism in Bay County.

Where the information from this report comes from

All of the data in this report come from the NOAA's National Marine Fisheries Program (NMFS) Marine Recreational Information Program (MRIP). These data are publicly available for download at <https://www.fisheries.noaa.gov/recreational-fishing-data/data-downloads>. The MRIP program contains information voluntarily provided by anglers at fishing locations surveyed according to a scientifically designed sampling program. Data are continuously collected, but data in this report are for years 2009-2019. Future reports will show updated data as they are available.

NMFS MRIP background

What is MRIP—the Marine Recreational Information Program?

While commercial fishers have a separate reporting system with specific requirements for commercial fishers to report fishing locations and catches to state and federal agencies, no such requirements exist for recreational fishers. The MRIP is NMFS's way of gathering information needed to sustainably manage recreational fisheries. The MRIP allows state and federal researchers and managers to understand things like:

- How many recreational fishing trips are being taken in a region and time period?
- Are these trips for-hire, private-recreational (fishing out of a personal or rented vessel) or shore-based? These separate categories are called the fishing “mode” in MRIP.
- How many of these trips target a certain species?
- What state and county do anglers come from when they fish a certain area?
- Additional information about angler catch rates and sizes of fish.

These things (especially information about total fishing effort, catch rates, and fish size) can be important for developing stock assessments that inform fisheries management decisions. The MRIP system includes two main surveys. One is an “access point” or “intercept” survey designed to understand aspects of fishing trips like length of trip, origin, target species, etc. The other, **which this report does not use**, is designed to understand what proportion of the human population in an area is engaging in these types of fishing trips. Information from the two surveys is combined to allow researchers to estimate some of the information described in the bullet points above, as well as important things like the total amount of a certain fish species that recreational fishers harvest or remove in a region and time.

What MRIP information does this report use?

It is important to understand that this report does not use the estimates from MRIP. This report only uses the actual data provided by the angler intercept survey, and specifically this report only includes anglers indicating they were on for-hire trips. This means all the data here are exactly what anglers are telling surveyors when they are interviewed. This distinction is important for a couple reasons. The data used here are simply descriptive. We do not show “error” or “uncertainty” around them, because we are reporting the metrics from the database, and not extrapolating the data by any statistical weighting factors or subjecting them to statistical estimation processes. What this means, is that the data here should describe general trends like what people fish for and where they come from, as long as anglers are correctly reporting to surveyors what they did when they went fishing. These data also depend on the MRIP statistical process for determining how to survey which intercept sites (boat ramps, access points). There are a lot of statistical details on this last point, but in short, as long as the MRIP sites are sampled roughly in proportion to their use (so that more frequently used sites are sampled more), these trends shown here should be correct. However, please understand that MRIP was designed mostly for tracking “big picture” changes (such as state-wide trends in effort). Thus the information here is for

informational purposes, and the authors cannot guarantee the statistical accuracy or precision of what is presented.

Additional information about MRIP

A lot of additional information is available about the NMFS MRIP data and how these data are used. We have described the parts of this information that are important to know to understand and best use the data provided in this report. Additional information directly through NOAA Fisheries at <https://www.fisheries.noaa.gov/topic/recreational-fishing-data>, as well as through the Marine Resource Education Program, MREP (different from MRIP), for which more information is available at: <https://www.gmri.org/our-work/fisheries-convening/mrep-southeast>. Finally, many Florida Sea Grant agents and county faculty, FWC personnel, and University of Florida researchers know about MRIP and may be able to answer additional questions.

Fishing Trip Origins: Where do your anglers come from?

Background on data used

Every for-hire recreational fishing trip made has an origin and a destination. In MRIP, the origin is described as the angler's residence, and the destination is defined as where the angler was surveyed (e.g., boat ramp, fishing pier, etc.). For specifically the maps in this report, the **origin** is considered to be the population centroid of the angler's county-of-residence. The population centroid is the spatial location in a county that "balances" the counties population. This means the centroid is the most likely "average" location for a person to come from, given we know they live in a certain county. For example, in Collier County, the population centroid would be closer to Naples in the east, than it would be to the middle of the county, which is sparsely populated. The fishing site destinations that are surveyed include those in the MRIP Access Point Angler Intercept Survey (APAIS) and are selected as part of a statistically designed survey. Further information about APAIS and the specific destinations is available at: <https://www.fisheries.noaa.gov/recreational-fishing-data/public-access-fishing-site-register>

Fishing Trip Origins: Background on methods used

For the for-hire recreational fishing trip origin information, we use data available in the MRIP "trips" databases that describe the results of the MRIP APAIS survey—this is the information that anglers tell surveyors when they are interviewed about their trips. We designed queries that let us look at the for-hire angler clients that were interviewed in specifically Bay County—i.e. the trips where anglers' fishing destination was in marine waters adjacent to Bay County, regardless of where the origin was. Once we have isolated the trips occurring in Bay County, we can analyze where most of these trips came from. Specifically, we can look at things like:

- The proportion of for-hire trips sampled in Bay County that come from out-of-state origins.
- The proportion of for-hire trips sampled in Bay County with in-state origins.
- Both the above, but for trips in a multi-county region that includes Bay County.

One thing that is important to note is that we report the proportion of the sampled for-hire trips. This is not the same as reporting the total number of for-hire trips. Enumerating the total number of trips would require estimation tools that are not described here. However, because of the statistical design that the MRIP APAIS survey is implemented, the proportions we use (of sampled for-hire trips) should generally correspond to the total numbers of for-hire trips. What this means is that the information in this report can be very useful for understanding where people come from when they make for-hire marine fishing trips in Bay County. Additional information on angler trip analyses is provided in (Camp et al. 2018).

We provide two types of information about angler origins:

- Tables describing where for-hire angler clients come from.
- Figures of maps graphically illustrating for-hire angler clients travel.

Fishing Trip Origins Results: Tables

We provide two tables summarizing where for-hire angler clients come from when they fish various parts of Florida and specifically the West Panhandle region and Bay County.

Table 1 compares the states that out-of-state angler clients come from when they fish either anywhere in Florida, the West Panhandle region, or specifically Bay County.

Table 2 shows the county-origins of for-hire trips made by Florida residents. It compares the proportion of sampled trips coming from counties by angler clients (*i*) living outside of the West Panhandle region, (*ii*) living outside of Bay County, and (*iii*) living anywhere in Florida, including Bay County.

We anticipate these tables may be useful in several ways, including:

- Understanding where for-hire angler clients fishing in Bay County come from, which may inform placement of fishing and tourism advertisements.
- Understanding how for-hire angler client origins may differ between Bay County and surrounding areas. This can potentially be used to further fine tune efficient advertisement placement by identifying locations where for-hire fishing captains in Bay County may compete more or less with nearby counties for angling visitors.
- Understanding what proportion of angler clients fishing Bay County are local vs. visitors, which may be useful for deciding where to have meetings about Bay County for-hire fishing.

Table 1

Out-of-state for-hire angler client origins comparison

Orig.(FL)	Prop.	Orig.(West Panhandle)	Prop.	Orig.(Bay)	Prop.
Georgia	0.116	Georgia	0.337	Georgia	0.330
Texas	0.072	Alabama	0.170	Alabama	0.173
Not Available	0.068	Tennessee	0.140	Tennessee	0.144
Alabama	0.065	Texas	0.055	Texas	0.054
Tennessee	0.063	Kentucky	0.035	Kentucky	0.036
Illinois	0.048	Missouri	0.031	Missouri	0.032
New York	0.041	Indiana	0.028	Indiana	0.029
Ohio	0.041	Illinois	0.019	Arkansas	0.018
Michigan	0.035	Arkansas	0.017	Illinois	0.017
Indiana	0.031	Mississippi	0.016	Mississippi	0.017

Table 1. State origins of for-hire angler clients fishing Florida, the West Panhandle region, and Bay County, for 2009-2019.

This table compares which states out-of-state for-hire angler clients come from when they fish either Florida as a whole, the West Panhandle region (here defined as including Walton, Bay, and Gulf counties), or Bay County.

- Columns 1 & 2 show the state origins of non-Florida residents when they make a for-hire trip to Florida.
- Columns 3 & 4 show the state origins of non-Florida residents when they make a for-hire trip to the West Panhandle region.
- Columns 5 & 6 show the state origins of non-Florida residents when they make a for-hire trip to Bay County.

This comparison allows understanding where (i) out of state for-hire angler clients fishing Bay County come from, and (ii) how that compares to the local region and broader state of Florida. This may be helpful for understanding if Bay County is attracting for-hire angler clients from specific origins differently than the surrounding region of the West Panhandle, or Florida as a whole.

The “Not Available” is returned either when for-hire angler clients refuse to give state of origin, or more often when they do not reside in the US-i.e. international visitors.

Table 2

In-state for-hire angler client origin comparison

Out-of-region Orig.	Prop.	Out-of-county Orig.	Prop.	Any Orig.	Prop.
Leon	0.180	Leon	0.163	Bay	0.577
Okaloosa	0.090	Walton	0.138	Leon	0.069
Duval	0.079	Duval	0.074	Walton	0.058
Hillsborough	0.079	Hillsborough	0.074	Duval	0.031
Clay	0.048	Okaloosa	0.059	Hillsborough	0.031
Jackson	0.042	Clay	0.044	Okaloosa	0.025
Pinellas	0.042	Pinellas	0.039	Clay	0.019
Escambia	0.032	Jackson	0.034	Pinellas	0.017
Orange	0.032	Escambia	0.030	Jackson	0.015
Santa Rosa	0.032	Santa Rosa	0.030	Escambia	0.013

Table 2. County origins of Florida residents making for-hire trips to the West Panhandle region and Bay County, for 2009-2019.

This table compares which counties Florida resident angler clients come from when they make for-hire trips to the West Panhandle region (Walton, Bay, and Gulf counties) or specifically Bay County.

- Columns 1 & 2 show origins of Florida resident angler clients fishing the West Panhandle region who live outside of the West Panhandle region.
- Columns 3 & 4 show origins of Florida resident angler clients fishing Bay County but living outside of Bay County.
- Columns 5 & 6 show origins of Florida resident angler clients fishing Bay County, regardless of where in Florida they live.

This comparison allows understanding (i) where Florida resident angler who make for-hire fishing trips to the West Panhandle region and Bay County come from, and (ii) the Florida counties from which the greatest proportion of out-of-county for-hire trips come from.

Fishing Trip Origin Results: Maps

We provide several maps to graphically illustrate where sampled for-hire angler clients come from when they fish the West Panhandle region and Bay County. The maps show the “direct line” paths between the population centroids of angler clients’ county of residence and the location where they were sampled by the MRIP APAIS survey-i.e. their fishing destinations. For all maps, thicker and warmer colored lines indicate more trips from a given county to a given destination, and thinner and cooler colors suggests fewer trips. Here, different maps are created for different species, including the top five species targeted in the West Panhandle region.

Figure 1 maps trips to Bay County regardless of species targeted.

Figure 2 maps trips to the West Panhandle region when anglers targeted Red snapper.

Figure 3 maps trips to the West Panhandle region when anglers targeted King mackerel.

Figure 4 maps trips to the West Panhandle region when anglers targeted Greater amberjack.

Figure 5 maps trips to the West Panhandle region when anglers targeted Sea bass family.

Figure 6 maps trips to the West Panhandle region when anglers targeted Spanish mackerel.

The primary purpose of these figures is to serve as a visual aid to augment the use of the previous tables.

Figure 1.

Trips to Bay County, all species

Source: NMFS MRIP Trips data

Figure 1. Map showing where for-hire trips fishing Bay County originated in, regardless of species targeted, for 2009-2019. Thicker and warmer colored lines show relatively more trips taken, and thinner, cooler colored lines show that relatively fewer trips were taken.

Figure 2.

Trips to West Panhandle, Red snapper

Source: NMFS MRIP Trips data

Figure 2. Map showing where for-hire trips fishing the West Panhandle region originated in, when targeted Red snapper, for 2009-2019. Thicker and warmer colored lines show relatively more trips taken, and thinner, cooler colored lines show that relatively fewer trips were taken.

Figure 3.

Trips to West Panhandle, King mackerel

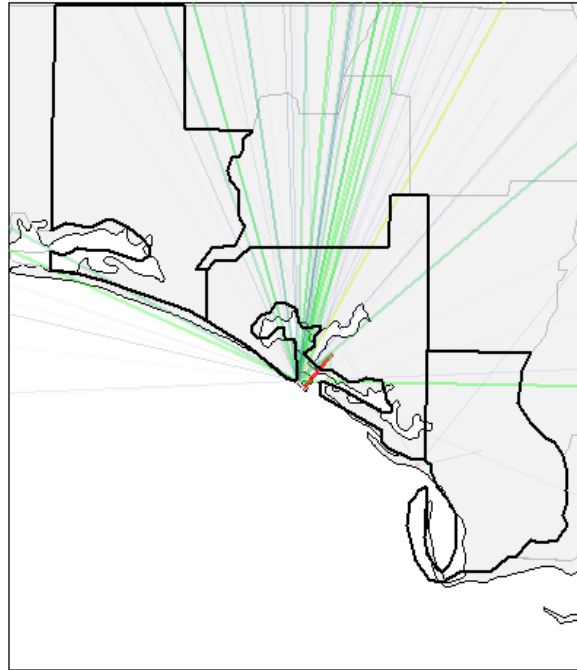

Source: NMFS MRIP Trips data

Figure 3. Map showing where for-hire trips fishing the West Panhandle region originated in, when targeted King mackerel, for 2009-2019. Thicker and warmer colored lines show relatively more trips taken, and thinner, cooler colored lines show that relatively fewer trips were taken.

Figure 4.

Trips to West Panhandle, Greater amberjack

Source: NMFS MRIP Trips data

Figure 4. Map showing where for-hire trips fishing the West Panhandle region originated in, when targeted Greater amberjack, for 2009-2019. Thicker and warmer colored lines show relatively more trips taken, and thinner, cooler colored lines show that relatively fewer trips were taken.

Figure 5.

Trips to West Panhandle, Sea bass family

Source: NMFS MRIP Trips data

Figure 5. Map showing where for-hire trips fishing the West Panhandle region originated in, when targeted Sea bass family, for 2009-2019. Thicker and warmer colored lines show relatively more trips taken, and thinner, cooler colored lines show that relatively fewer trips were taken.

Figure 6.

Trips to West Panhandle, Spanish mackerel

Source: NMFS MRIP Trips data

Figure 6. Map showing where for-hire trips fishing the West Panhandle region originated in, when targeted Spanish mackerel, for 2009-2019. Thicker and warmer colored lines show relatively more trips taken, and thinner, cooler colored lines show that relatively fewer trips were taken.

Species targeted: What do your anglers fish for?

Background on data used

The MRIP APIAS includes questions about the species that interviewed anglers were targeting on their recently completed fishing trips. Specifically, anglers are asked what their “primary” and “secondary” targeted species were. Not all anglers provide a specific species, though often more for-hire angler clients do. The species targeted information can be used here to understand what species are most commonly targeted on for-hire trips. Further information about APAIS and the specific destinations is available at: <https://www.fisheries.noaa.gov/recreational-fishing-data/public-access-fishing-site-register>.

Species targeted: Background on methods used

To understand what fish species for-hire angler clients most commonly targeted, we use data available in the MRIP “trips” databases from specifically for-hire trips. These data contain the information that anglers tell surveyors when they are interviewed about their recreational fishing for-hire trips. We designed a series of queries to calculate the proportions of trips targeting specific fish species. Queries represented different scenarios regarding where anglers were intercepted (their destinations) and where they listed their home residence (their origin). This information was summarized by pooling trips over time—i.e. looking at the last 10 years (2009-2019) together. To assess potential changes in the fish that anglers target, we also analyzed time series for species most commonly targeted by for-hire angler clients. Time series were constructed by assessing the proportions of trips intercepted in the West Panhandle region that targeted a specific species for each of the last 10 years.

Species targeted: Information provided

Two types of information products were developed:

- Tables describing the proportions of for-hire trips targeting different fish species at various combinations of fishing locations and residences.
- Figures showing the time series of proportion of for-hire trips taken in the West Panhandle region targeting the most popular fish species.

One thing that is important to note is that we report the proportion of the sampled for-hire trips targeting a certain species. This is not the same as reporting the total number of for-hire trips. Enumerating the total number of trips would require estimation tools that are not described here. However, because of the statistical design used to implement the MRIP APAIS survey, the proportions we use (of sampled for-hire trips) should correspond to the total numbers of trips. What this means is that the information in this report can be very useful for things like understanding where people, on average, are coming from when they make for-hire trips to Bay County.

Species Targeted Results: Tables

Tables describing the proportions of trips targeting different fish species at various combinations of fishing locations and residences, including:

- For-hire trips in all of Florida, regardless of origin.
- For-hire trips in Florida's 7 coast, regardless of origin.
- For-hire trips in the West Panhandle region, regardless of origin.
- For-hire trips taken in Bay County, regardless of origin.
- For-hire trips taken in Bay County by Bay County residents.
- For-hire trips taken in Bay County by non-residents of Bay County.
- For-hire trips taken in Bay County by out-of-state anglers.

These results are summarized in two separate tables that promote comparison of Bay County to surrounding areas. All results represent data pooled over the last 10 years (2009-2019).

We anticipate these tables may be useful in several ways, including:

- Understanding what species angler clients are targeting when they make for-hire trips in Bay County, which may help inform advertising or business decisions by local for-hire captains.
- Understanding what species visiting (non Bay-County residents) angler clients target, which may inform the media outlets and visuals (e.g., fish photos) of future advertisements or information produced by the Manatee County Tourism Development Council in support of the for-hire fishing sector.

*Table 3**Proportion of species targeted in for-hire trips, comparing county to state*

FL trips	Prop.	FL 7 trips	Prop.	West Panhandle trips	Prop.	Bay trips	Prop.
No Target	0.555	No Target	0.527	No Target	0.585	No Target	0.602
Red snapper	0.047	Red snapper	0.056	Red snapper	0.180	Red snapper	0.183
King mackerel	0.044	King mackerel	0.045	King mackerel	0.071	King mackerel	0.073
Dolphin	0.038	Red grouper	0.044	Greater amberjack	0.033	Greater amberjack	0.035
Red grouper	0.035	Dolphin	0.036	Sea bass family	0.026	Sea bass family	0.023
Red drum	0.030	Red drum	0.030	Spanish mackerel	0.022	Spanish mackerel	0.023
Spotted seatrout	0.024	Spotted seatrout	0.028	Red drum	0.017	Red drum	0.008
Spanish mackerel	0.022	Spanish mackerel	0.027	Spotted seatrout	0.012	Requiem shark family	0.007
Atlantic tarpon	0.021	Atlantic tarpon	0.025	Requiem shark family	0.008	Jack family	0.006
Sailfish	0.021	Gag	0.021	Jack family	0.006	Mackerel family	0.006

Table 3. Comparison of species targeted in for-hire trips to Bay County to other regions of Florida, for 2009-2019.

- Columns 1 & 2 show species targeted by for-hire trips made throughout Florida.
- Columns 3 & 4 show species targeted by for-hire trips made to the 7 coast of Florida.
- Columns 5 & 6 show species targeted by for-hire trips made in the West Panhandle region.
- Columns 7 & 8 show species targeted by for-hire trips made in Bay County.

*Table 4**Proportion of species targeted in for-hire trips, comparing county to state*

All Bay trips	Prop.	In county trips	Prop.	Out of county trips	Prop.	Out of state trips	Prop.
No Target	0.602	No Target	0.585	No Target	0.603	No Target	0.607
Red snapper	0.183	Red snapper	0.227	Red snapper	0.180	Red snapper	0.177
King mackerel	0.073	Sea bass family	0.076	King mackerel	0.075	King mackerel	0.074
Greater amberjack	0.035	Greater amberjack	0.032	Greater amberjack	0.035	Greater amberjack	0.035
Sea bass family	0.023	King mackerel	0.032	Spanish mackerel	0.024	Spanish mackerel	0.024
Spanish mackerel	0.023	Cobia	0.011	Sea bass family	0.019	Sea bass family	0.020
Red drum	0.008	Lefteye flounder family	0.011	Red drum	0.008	Red drum	0.009
Requiem shark family	0.007	Spanish mackerel	0.007	Requiem shark family	0.008	Requiem shark family	0.008
Jack family	0.006	Jack family	0.004	Vermilion snapper	0.007	Jack family	0.007
Mackerel family	0.006	Lionfish	0.004	Jack family	0.006	Vermilion snapper	0.007

Table 4. Proportions of species targeted by for-hire fishing trips made in Bay County by anglers from various origins, for 2009-2019.

- Columns 1 & 2 show the species targeted by all for-hire trips made in Bay County.
- Columns 3 & 4 show the species targeted in Bay County by Bay residents making for-hire trips.
- Columns 5 & 6 show the species targeted in Bay County by Florida residents not living in Bay County making for-hire trips.
- Columns 7 & 8 shows the species targeted in Bay County by non-residents of Florida making for-hire trips.

Species Targeted Results: Time series figures

We provide time series of the proportion of sampled for-hire trips that targeted each of the top nine species targeted in for-hire trips in the West Panhandle region. Data are available for each year from 2009-2019, and represent the raw proportions of surveyed trips, which means that no uncertainty estimates (e.g. “error” bars) are relevant to these data.

The multi-panel figure below should primarily be useful for understanding how the species of fish for-hire angler clients target when they fish has changed in recent years. These changes may be related to changes in for-hire angler or captain preferences, but can have other causes as well, such as:

- Changes in costs of for-hire fishing (e.g., fuel or other variable costs).
- Changes in fishing regulations for specific species.
- Changes in fish populations, which can be the result of changing fishing, climate, fisheries management, or habitat, as well as perturbations like red tide or cold kills.

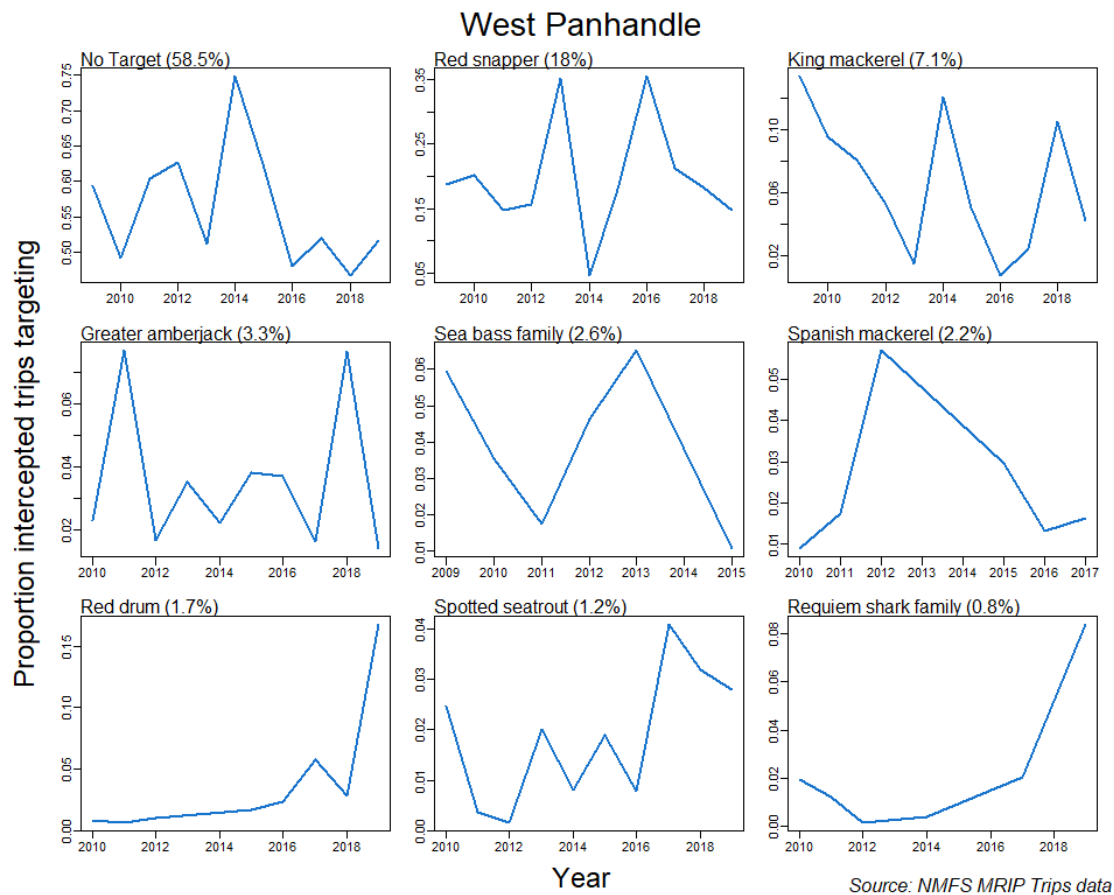

Figure 6. Time series of the proportion of sampled for-hire trips targeting each of the top 9 fish species targets in the West Panhandle region, for 2009-2019.

Each panel describes the time series for one of the top-targeted fish species (including no species targeted, “No Target”). Proportion of total for-hire trips targeting each species over the entire span of years (2009-2019) shown is provided in parentheses following each species’ name.

Sample Sizes of data for this report

Some counties do not have a large for-hire fishing industry, and it is important to understand if the data in this report come from relatively small samples. Here we provide the sample sizes for some of the types of trips referenced here. Please note these sample sizes describe the number of trips **surveyed**, not the total number of trips taken.

Table 5

Proportion of species targeted in for-hire trips, comparing county to state

Type of for-hire trips	Number of trips sampled
All West Panhandle Region	5331
All Bay County	5056
Bay trips by Bay County residents	277
Bay trips by FL but not Bay County residents	203
Bay trips by non-Bay County residents	4779
Bay trips by non-FL residents	4576

Table 5. The number of for-hire fishing trips intercepted and surveyed that were used for this report. Note the table specifies sample sizes of for-hire trips taken to the broader West Panhandle region as well as those taken to Bay County. Samples sizes of for-hire trips to Bay County are further described by origin.
