Abbreviations and Definitions

NMFS: National Marine Fisheries Service, sometimes called NOAA Fisheries **MRIP:** Marine Recreational Information Program, which is operated by NOAA Fisheries to survey coastal anglers.

APAIS: Access Point Angler Intercept Survey, the survey implemented by MRIP to collect information about angling.

Big Bend region: refers to the areas of land and marine waters adjacent to Franklin, Wakulla, Jefferson, and Taylor counties. **For-hire:** Refers to fishing trips and anglers who pay to fish with someone else, such as with a guide, a charter captain, or on a head- or party boat.

Overview Summary

Why this report might be important

Recreational fishing is one of the dominant recreational uses of marine ecosystems globally, and marine recreational fisheries (recreational fisheries occurring in saltwater) are particularly important to Florida. The for-hire fishing sector—in which anglers pay to fish with a guide or captain, in particular importance because they (1) provide access to fisheries to those who often may not have their own vessel, and (2) provide a livelihood for those guides, captain's, and deckhands in the for-hire business. Information about for-hire fisheries is collected by state () and by federal (NOAA Fisheries) agencies. This information is available in large databases such as the NOAA Marine Recreational Information Program (MRIP), but requires expertise to query, extract, and visualize. We have queried these databases and summarized for-hire information we think may be helpful to Visit Wakulla. **Specifically this information can be used to inform for-hire fishing-related tourism in Wakulla County.**

What this report can be used for

This report is designed to provide information about marine recreational for-hire fishing dynamics in Wakulla County. The for-hire fishing sector includes private charters where a small group of anglers (usually 1-6 people) hire a guide to take them fishing, as well as “party” or “head” boats, where usually 20 or more anglers pay per person to fish from a larger, captained boat. The for-hire fishing industry is important for several reasons. First, it represents employment and livelihoods for the guides, captains, and crew offering for-hire fishing services. Second, the for-hire sector allows people who do not own or rent their own boats access to recreational fishing. Finally, the for-hire sector can play a role in tourist decisions, as the availability of for-hire fishing can attract angler from out of county, state, or even country to travel to local areas to stay and fish.

The for-hire fishing dynamics described here include information about what species of fish for-hire recreational fishers (here called “angler clients”) are most often trying to catch and where angler clients come from when they make a for-hire trip to marine waters from Wakulla County. Angler targeting and travel information may have several uses.

Understanding what fish species are commonly targeted may help inform:

- Which species are most popular with local or non-local angler clients.
- How to best advertise fishing in this area—e.g. what fish species should be pictured in advertisements.
- Which fishery management rule changes **might** most affect the local for-hire industry and their angler clients.
- How changes in fish populations (like from a habitat change or fish kill) may affect the amount of for-hire fishing trips, angler travel, and eventually, local economies.

Information on where anglers come from when they fish local waters has multiple potential uses as well, and we think it can inform:

- Locations to place advertisements for local for-hire fishing. For example, does it make more sense to advertise Wakulla County recreational fishing in New York, or in Georgia?
- Which people might want to be involved in local for-hire fisheries decision-making. For example, if many angler clients who commonly fish Wakulla County reside in other counties, these anglers may be interested in Wakulla County rule changes.

Together, this information is intended to help the local for-hire fishing industry and related tourism industry of Wakulla County. It may also be useful to the Visit Wakulla, especially if they work with or on behalf of the for-hire fishing industry to promote marine for-hire fishing-based tourism in Wakulla County.

Where the information from this report comes from

All of the data in this report come from the NOAA's National Marine Fisheries Program (NMFS) Marine Recreational Information Program (MRIP). These data are publicly available for download at <https://www.fisheries.noaa.gov/recreational-fishing-data/data-downloads>. The MRIP program contains information voluntarily provided by anglers at fishing locations surveyed according to a scientifically designed sampling program. Data are continuously collected, but data in this report are for years 2014-2024. Future reports will show updated data as they are available.

NMFS MRIP background

What is MRIP?

The MRIP is NOAA Fisheries' data program to inform sustainable management of recreational fisheries, and helps decision-makers understand things like:

- How many recreational fishing trips are being taken in a region and time period?
- How many of these trips target a certain species?
- What are angling catch rates and how are they changing?
- What are the sizes of fish that are harvested?
- Are these trips for-hire, private-recreational (fishing out of a personal or rented vessel) or shore-based? These separate categories are called the fishing "mode" in MRIP.

The MRIP system includes two main surveys. One is an "access point" or "intercept" survey designed to understand aspects of fishing trips like length of trip, origin, target species, etc. The other survey, which this report does not use, is designed to understand what proportion of the human population in an area is engaging in these types of fishing trips. Information from the two surveys is combined to allow researchers to estimate some of the information described in the bullet points above, as well as important things like the total amount of a certain fish species that recreational fishers harvest or remove in a region and time.

What MRIP information does this report use?

This report only uses the actual data provided by the angler intercept survey—i.e. from interviews with anglers returning from fishing. Specifically this report only includes information from anglers who were on for-hire trips. This means all the data shown here are what anglers are saying when they are interviewed. We do not show "error" or "uncertainty" around the data presented because we are reporting the metrics from the database, and not extrapolating the data by any factors or subjecting them to statistical estimation processes. The data in this report are what for-hire anglers said, may not always describe the overall for-hire angler population, especially in places or times when few for-hire anglers were interviewed.

Additional information about MRIP

Additional information is available about the NMFS MRIP data and their use. Additional information directly through NOAA Fisheries at

<https://www.fisheries.noaa.gov/topic/recreational-fishing-data>, as well as through the Marine Resource Education Program, MREP, for which more information is available at: <https://www.gmri.org/our-work/fisheries-convening/mrep-southeast>. Finally, many Sea Grant agents and county faculty, personnel, and researchers know about MRIP and may be able to answer additional questions.

Fishing Trip Origins: Where do your for-hire anglers come from?

Background on data used

Recreational fishing trips all have an origin and a destination. In the MRIP data system, the origin is described as the angler's county of residence, and this report uses the population centroid of that county as the origin location. The MRIP data defines the destination as the specific place where the angler was intercepted by the MRIP survey (e.g., boat ramp, fishing pier, etc.). The fishing site destinations that are surveyed include those in the MRIP Access Point Angler Intercept Survey (APAIS). What is important is that these destination sites are selected as part of a statistically designed survey. Further information about APAIS and the specific destinations is available at:

<https://www.fisheries.noaa.gov/recreational-fishing-data/public-access-fishing-site-register>

Fishing Trip Origins: Background on methods used

For the recreational fishing trip origin information, we use data available in the MRIP "trips" databases that describe the results of the MRIP APAIS survey—this is the information that anglers tell surveyors when they are interviewed about their trips. We designed queries that let us look at the anglers that were interviewed in specifically Wakulla County—i.e. the trips where anglers' fishing destination was in marine waters adjacent to Wakulla County, regardless of where the origin was. Once we have isolated the trips occurring in Wakulla County, we can analyze where most of these trips came from. Specifically, we can look at things like:

- The percent of for-hire trips sampled in Wakulla County that come from out-of-state origins.
- The percent of for-hire trips sampled in Wakulla County with in-state origins.
- The percent of for-hire trips sampled in Wakulla County with in-state but out-of-county origins.

The above are important for understanding how people and dollars move from out of the county to in to the county because of the for-hire fishery. However, this report does not calculate those dollars, or provide the estimates of the total numbers of trips. Some of this information is provided in other reports available upon request of the authors, and additional information on angler trip analyses is provided in (Camp et al. 2018).

We provide two types of information about for-hire angler origins:

- Tables describing where for-hire anglers come from.
- Figures of maps graphically illustrating for-hire anglers' travel.

Fishing Trip Origins Results: Tables

We provide two tables summarizing where for-hire anglers come from when they fish various parts of Florida and specifically the Big Bend region and Wakulla County.

Table 1 compares the states that out-of-state for-hire anglers come from when they fish either anywhere in Florida, the Big Bend region, or specifically Wakulla County.

Table 2 shows the county-origins of trips made by Florida residents. It compares the proportion of sampled trips coming from counties by for-hire anglers (*i*) living outside of the Big Bend region, (*ii*) living outside of Wakulla County, and (*iii*) living anywhere in Florida, including Wakulla County.

We anticipate these tables may be useful in several ways, including:

- Understanding where for-hire anglers fishing in Wakulla County come from, which may inform placement of fishing and tourism advertisements.
- Understanding how for-hire angler origins may differ between Wakulla County and surrounding areas. This can potentially be used to further fine tune efficient advertisement placement by identifying locations where Wakulla County may compete more or less with nearby counties for angling visitors.
- Understanding what proportion of for-hire anglers fishing Wakulla County are local vs. visitors, which may be useful for deciding where to have meetings about Wakulla County fishing.

Table 1

Out-of-state angler origins comparison

Origin when fishing FL	Per. (%)	Origin when fishing Big Bend	Per. (%)	Origin when fishing Wakulla	Per. (%)
Georgia	10.1	Georgia	60.8	Georgia	74.5
Texas	7.8	Alabama	9.0	Alabama	10.2
Tennessee	5.3	Tennessee	8.8	Texas	3.6
Not Available	5.1	Texas	3.1	Colorado	2.2
Ohio	4.9	Kentucky	2.4	Tennessee	2.2
Illinois	4.7	South Carolina	2.4	South Carolina	1.5
Michigan	4.5	North Carolina	1.5	Utah	1.5
New York	4.1	Louisiana	1.3	Connecticut	0.7
Alabama	3.9	Colorado	0.9	New York	0.7
Indiana	3.4	Utah	0.9	North Carolina	0.7

Table 1. Where out-of-state for-hire anglers came from when they fished Florida, the Big Bend region, and Wakulla County, for 2014-2024.

This table shows the top ten states that out-of-state for-hire anglers come from when they fish in Florida. It allows comparisons of out-of-state origins for Florida as a whole, the Big Bend region (here defined as including Franklin, Wakulla, Jefferson, and Taylor counties), and Wakulla County.

- Columns 1 & 2 show where non-Florida residents come from when they for-hire fish in **Florida**.
- Columns 3 & 4 show where non-Florida residents come from when they for-hire fish the **Big Bend** region.
- Columns 5 & 6 show where non-Florida residents come from when they for-hire fish **Wakulla** County.

This comparison allows understanding where (*i*) out of state for-hire anglers fishing Wakulla County come from, and (*ii*) how that compares to the local region and broader state of Florida. This may be helpful for understanding if Wakulla County is attracting anglers from specific origins differently than the surrounding region of the Big Bend, or Florida as a whole. The “Not Available” is returned either when anglers refuse to give state of origin, or do not reside in the US-i.e. international visitors.

Table 2

In-state angler origin comparison

Out-of-region Orig.	Per. (%)	Out-of-county Orig.	Per. (%)	Any Orig.	Per. (%)
Duval	18.1	Leon	20.8	Leon	17.9
St Johns	14.7	Manatee	20.8	Manatee	17.9
Leon	9.5	St Johns	16.7	St Johns	14.3
Alachua	6.9	Duval	8.3	Wakulla	14.3
Columbia	6.0	Nassau	8.3	Duval	7.1
Hillsborough	4.3	Pasco	8.3	Nassau	7.1
Manatee	4.3	Collier	4.2	Pasco	7.1
Nassau	4.3	Franklin	4.2	Collier	3.6
Jackson	2.6	Marion	4.2	Franklin	3.6
Levy	2.6	Seminole	4.2	Marion	3.6

Table 2. County origins of Florida for-hire anglers fishing the Big Bend region and Wakulla county, for 2014-2024.

This table compares which counties Florida resident anglers come from when they fish the Big Bend region (Franklin, Wakulla, Jefferson, and Taylor counties) or specifically Wakulla County.

- Columns 1 & 2 show where Florida residents who live outside of the Big Bend region come from when they for-hire fish the Big Bend region.
- Columns 3 & 4 show where Florida residents who live outside of Wakulla County come from when they for-hire fish Wakulla County.
- Columns 5 & 6 show where Florida residents come from, regardless of what county they live in, when they for-hire fish Wakulla County.

This comparison allows understanding (*i*) where Florida resident for-hire anglers fishing the Big Bend region and Wakulla County come from, and (*ii*) the Florida counties from which the greatest proportion of out-of-county trips come from. It also may be useful to understand the approximate percent of trips that are made by county residents vs. all county non-residents. For Wakulla County, 2% of trips intercepted were made by residents, and 98% were made by non-county residents.

Fishing Trip Origin Results: Maps

We provide several maps to graphically illustrate where sampled for-hire anglers come from when they fish the Big Bend region and Wakulla County. The maps show the “direct line” paths between the population centroids of the for-hire anglers’ county of residence and the location where they were sampled by the MRIP APAIS survey-i.e. their fishing destinations. For all maps, thicker and warmer colored lines indicate more trips from a given county to a given destination, and thinner and cooler colors suggests fewer trips. Here, different maps are created for different species, including the top five species targeted in the Big Bend region.

Figure 1 maps trips to Wakulla County regardless of species targeted.

Figure 2 maps trips to the Big Bend region when anglers targeted Spotted seatrout.

Figure 3 maps trips to the Big Bend region when anglers targeted Red drum.

Figure 4 maps trips to the Big Bend region when anglers targeted Atlantic tarpon.

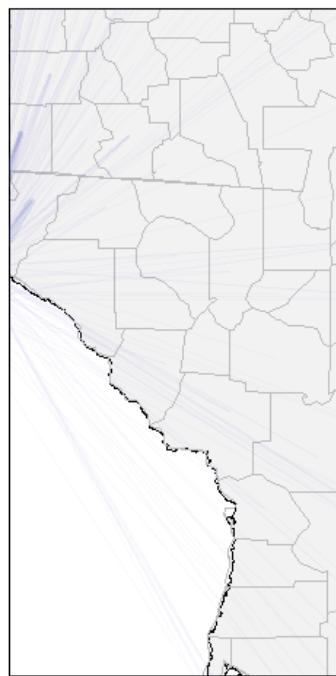

Figure 5 maps trips to the Big Bend region when anglers targeted Red snapper.

Figure 6 maps trips to the Big Bend region when anglers targeted Sea bass family.

The primary purpose of these figures is to serve as a visual aid to augment the use of the previous tables.

Figure 6.

Trips to Big Bend, Sea bass family

Source: NMFS MRIP Trips data

Figure 6. Map showing where for-hire trips fishing the Big Bend region originated in, when targeted Sea bass family, for 2014-2024. Thicker and warmer colored lines show relatively more trips taken, and thinner, cooler colored lines show that relatively fewer trips were taken.

Species targeted: What do your for-hire anglers fish for?

Background on data used

The MRIP APIAS includes questions about the species that interviewed for-hire anglers were targeting on their recently completed fishing trips. Specifically, for-hire anglers are asked what their “primary” and “secondary” targeted species were. Not all anglers provide a specific species. Though many anglers do not specify a target (e.g., “fishing for whatever is biting”), this information is also useful. Further information about APAIS and the specific destinations is available at: <https://www.fisheries.noaa.gov/recreational-fishing-data/public-access-fishing-site-register>.

Species targeted: Background on methods used

We used MRIP “trips” data that contain information from intercepted for-hire angler interviews to understand what fish species anglers most commonly fished for. Essentially surveyors visit fishing access sites and ask anglers about their fishing trips. Data from these interviews are shown for different “queries”. Queries represented different scenarios regarding where anglers were intercepted (their destinations) and where they listed their home residence (their origin). This information was summarized by pooling trips over time—i.e. looking at the last 10 years (2014-2024) together. To assess potential changes in the fish that anglers target, we also analyzed time series for some of the most commonly targeted species. Time series were constructed by assessing the proportions of trips intercepted in the Big Bend region that targeted a specific species for each of the last 10 years.

Species targeted: Information provided

Two types of information products were developed:

- Tables describing the proportions of for-hire trips targeting different fish species at various combinations of fishing locations and residences.
- Figures showing the time series of proportion of for-hire trips taken in the Big Bend region targeting the most popular fish species.

It is important to note is that we report the percent of the sampled trips targeting a certain species, not the actual total estimates of trips targeting a species. The percentages we use here should closely match estimates because of the statistical design used to implement the MRIP APAIS survey. This means is that the information in this report can be very useful for things like understanding what people, on average, are fishing for when they fish Wakulla County, but it wouldn’t be appropriate to try to use these percentages to understand the total amount of fishing effort.

Species Targeted Results: Tables

Tables describing the proportions of trips targeting different fish species at various combinations of fishing locations and residences, including:

- For-hire trips in all of Florida, regardless of origin.
- For-hire trips in the Big Bend region, regardless of origin.
- For-hire trips taken in Wakulla County, regardless of origin.
- For-hire trips taken in Wakulla County by Wakulla County residents.
- For-hire trips taken in Wakulla County by non-residents of Wakulla County.
- For-hire trips taken in Wakulla County by out-of-state anglers.

These results are summarized in two separate tables that promote comparison of Wakulla County to surrounding areas. All results represent data pooled over the last 10 years (2014-2024).

We anticipate these tables may be useful in several ways, including:

- Understanding what species anglers are targeting when they fish in Wakulla County, which may help inform local government interest in state and regional fisheries management issues.
- Understanding what species visiting (non Wakulla-County residents) anglers target, which may inform the media outlets and visuals (e.g., fish photos) of future advertisements).

Table 3

Species targeted by for-hire trips, comparing county to state

FL trips	Per. (%)	Big Bend trips	Per. (%)	Wakulla trips	Per. (%)
No Target	49.0	Spotted seatrout	33.6	Spotted seatrout	36.4
Red snapper	5.7	Red drum	22.5	No Target	26.1
King mackerel	4.6	No Target	22.0	Red drum	15.2
Red drum	4.4	Atlantic tarpon	8.7	Atlantic tarpon	9.1
Dolphin	4.1	Red snapper	7.0	Red snapper	7.3
Red grouper	3.5	Sea bass family	1.5	Sea bass family	3.0
Common snook	2.8	Gag	0.9	Gag	2.4
Spanish mackerel	2.6	Sheepshead	0.7	Spanish mackerel	0.6
Spotted seatrout	2.6	Sand seatrout	0.6	NA	NA
Atlantic tarpon	2.4	Tripletail	0.6	NA	NA

Table 3. Comparison of species targeted by for-hire anglers in Wakulla county to other areas of Florida, for 2014-2024.

- Columns 1 & 2 show species targeted by for-hire trips made throughout Florida.
- Columns 3 & 4 show species targeted by for-hire trips made in the Big Bend region.
- Columns 5 & 6 show species targeted by for-hire trips made in Wakulla County.

Table 4

Species targeted by for-hire trips, comparing county to state

In county trips	Per. (%)	Out of county trips	Per. (%)	Out of state trips	Per. (%)
Red drum	50	Spotted seatrout	37.3	Spotted seatrout	38.7
Gag	25	No Target	26.1	No Target	24.1
No Target	25	Red drum	14.3	Red drum	14.6
NA	NA	Atlantic tarpon	9.3	Atlantic tarpon	10.9
NA	NA	Red snapper	7.5	Red snapper	5.8
NA	NA	Sea bass family	3.1	Sea bass family	3.6
NA	NA	Gag	1.9	Gag	1.5
NA	NA	Spanish mackerel	0.6	Spanish mackerel	0.7
NA	NA	NA	NA	NA	NA
NA	NA	NA	NA	NA	NA

Table 4. Proportions of species targeted by fishing trips made in Wakulla county by anglers from various origins, for 2014-2024.

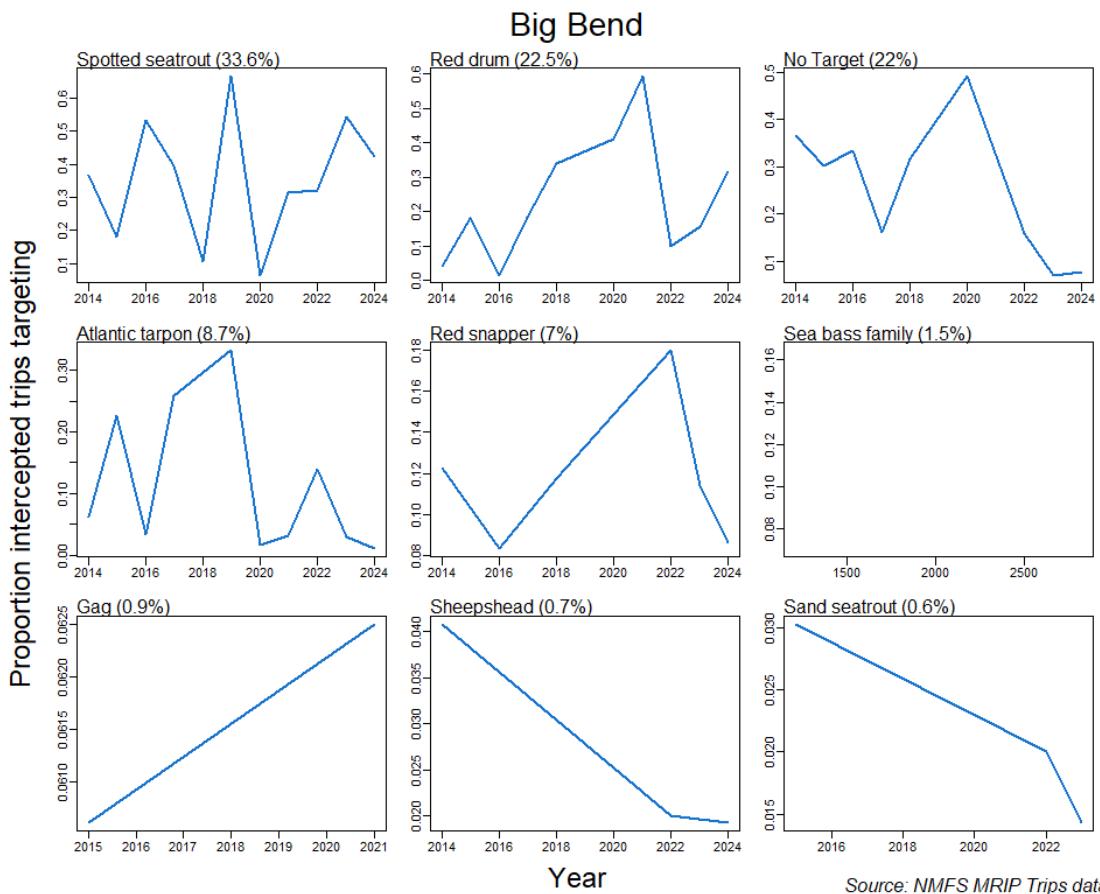

- Columns 1 & 2 show the species targeted in Wakulla County by Wakulla County residents.
- Columns 3 & 4 show the species targeted in Wakulla County by Florida residents not living in Wakulla County.
- Columns 5 & 6 shows the species targeted in Wakulla County by non-residents of Florida.

Species Targeted by For-Hire Trips: Time series figures

We provide time series of the proportion of intercepted for-hire trips that targeted each of the top nine species fished for in the Big Bend region. Data are available for each year from 2014-2024, and represent the raw proportions of surveyed trips, which means that no uncertainty estimates (e.g. “error” bars) are relevant to these data.

The multi-panel figure below should primarily be useful for understanding how the species of fish anglers target when they fish has changed in recent years. These changes may be related to changes in angler’s preferences, but can have other causes as well, such as:

- Changes in costs of fishing (e.g., fuel), since some species require larger boats or longer travel times to target.
- Changes in fishing regulations for specific species.
- Changes in knowledge of how to successfully target specific species.
- Changes in fish populations, which can be the result of changing fishing, fisheries management, or habitat, as well as perturbations like red tide or cold kills.

Source: NMFS MRIP Trips data

Figure 6. Time series of the proportion of intercepted for-hire trips targeting each of the top 9 fish species targets in the Big Bend region, for 2014-2024.

Each panel describes the time series for one of the top-targeted fish species (including no species targeted, “No Target”). Proportion of total trips targeting each species over the entire span of years (2014-2024) shown is provided in parentheses following each species’ name.
